

Technical Interpretation TI-14.09.001

Document: **ANSI Z97.1-2009** Date: September 30, 2014
Referenced Section(s): Section 6.1.(4) Place of fabrication

Interpretation Request: (What needs clarification/modification/removal?)
Does having the SGCC number on the logo fulfill 6.1.(4) Place of fabrication?

Request Rationale:

I believe having the SGCC number on the logo fulfills this. Each SGCC number is physical plant specific.

Suggested Revised Language:

No language needed, just an interpretation

Interpretation:

SGCC number on the logo fulfills the requirement of 6.1.(4) Place of fabrication.

Rationale:

The logo is required to demonstrate compliance for the testing and also to identify the manufacturer in the event of a product recall or other need. As long as the manufacturer's name is readable by the lay-person, the plant of manufacture is used for traceability only. Therefore any identification code that is unique per plant of manufacture i.e.: SGCC number, is acceptable.

Keywords: Compliance, label, manufacture, logo
